

LoveboX, an illuminated heartbeat machine, was first created for interaction by hundreds of enthusiastic participants around the world.

Participants played together and **LoveboX** created friendship around the one thing that is common to all of us, the heartbeat.

Now, a larger, at scale, **LoveboX** is proposed. This version will take all of the original wonder and catapult it into even more interaction, music and community.

LoveboX:: Tabletop

Participants interact with LoveboX by placing their fingers in the sensor. LoveboX reads their heartbeat and plays it back as a percussive noise!

LoveboX:: At Scale

About :: LoveboX offers an opportunity for uninhibited community interaction with the life force of the body – the heart.

LoveboX encourages interaction for up to 8 people simultaneously. Each person's heartbeat is linked to a percussive sound and illuminated visual. As each person's heartbeat resonates with the LoveboX, a unique drum circle is created by the participants.

LoveboX

Tech Specs :: LoveboX measures 8' H x 12' L x 3' W

Decibel level is ambient, and adjustable.

Power requirement is 110V/ 15A.
